Tribute

Too many times we wait until a friend and colleague has died to tell the world what they meant to us. Like most of you, I too am guilty of this. It was with great sadness that I heard of Pauline's passing and I would like to pay tribute to what a gifted woman she was. As a colleague I dealt with Pauline for over eleven years and during this time grew to know her as a dedicated and committed professional. She was always willing to go the extra mile for her clients, irrespective of whether it would bring her a monetary reward.

Pauline Bouwer

Pauline had the uncanny knack of being able to see what lay beneath and she developed strong ties with many of her clients through her caring and thoughtful approach. She had a kind word for everyone and understood what true friendship is. Pauline's untimely death is a great loss not only to the business to business publishing industry, but also to those of us to whom she was a friend and confidante. She was an inspiration to all whose paths she crossed, and I, like many of you, will remember her for touching my life.

"Tribology 2011"

First Announcement & Call For Papers
10th International Tribology Conference
5-7 April 2011, University of Pretoria

The main aim of the Conference is to provide participants with an opportunity to present their work and to exchange ideas and results, and to meet people with similar tribological interests.

Guest speakers

Our plenary guest speakers are Professor Bharat Bhushan, Director, Nanoprobe Laboratory for Bio- & Nanotechnology and Biomimetics, Department of Mechanical Engineering, Ohio State University, and Professor Kristian Tonder, of the Faculty of Engineering Science and Technology at NTNU, Trondheim, Norway.

Topics

Experimental, theoretical and case studies on the following topics can be submitted:

- Industrial Tribology - Problems and solutions.
- Lubricants Testing and Condition Monitoring
- Wear Processes and Tribology of Materials
- EHD, Boundary and Fluid Film Lubrication
- Biotribological applications
- Tribology and the environment.
